Apply

OBJECTIVES:

This course is designed for physicians, CRNAs, physician assistants, nurses and other medical care providers who must maintain state-of-the-art knowledge of not only the specialty, but also the new techniques in the clinical setting of the participant. The content is designed to provide the participant with an advanced knowledge of the pharmacology and the selection, dosing considerations with methods of administration, safe use, and the appropriate recommendations and/or requirements of pertinent external organizations.

Incorporate the appropriate recommendations and/or requirements of pertinent external organizations, publications, and professional organizations—considering as serving on the authority for and/or holding the responsibility to compile and approve such elements in the provision of pharmacology and/or pharmaceutical services, whether in the setting, pediatrics, oncology, infectious, or psychiatric care management standards.

Review the pharmacology in the clinical setting of the participant.

ACCREDITATION: This activity has been planned and implemented in accordance with the Accreditation Council for Continuing Medical Education (ACCME) through the joint provider accreditation of the AOA, the American Academy of Family Physicians (AAFP), the American Academy of General Internal Medicine (AAMG), the American Academy of Pediatrics (AAP) and the American Osteopathic Association (AOA). The AOA is accredited by the Accreditation Council for Continuing Medical Education to provide mortgage in the field of anesthesiology with a maximum of 4 AMA PRA Category I Credits™. Physicians who successfully complete this activity will receive AMA PRA Category I Credit(s)™ and credit toward the American Board of Anesthesiology Continuing Certification Program (MOC).

AAFP: This program is approved for a total of 30 AAFP Category 1 Credits (self-assessment credit will be approved).

AAP: This program has been approved for 30 hours of Category 1 continuing medical education credits by the American Board of Pediatrics.

AMA: This program has been approved for 50 AMA PRA Category I Credits™ and 50 hours of Category 2 credit.

RNs: This program is approved for continuing education credits.

IN: This program is approved by the State of Minnesota Board of Nursing, Provider Number 2295, for 30 contact hours. The Minnesota Board of Nursing, Provider Number 24384, also approves this program for 30 contact hours. Nurses also receive 30 contact hours from the Wisconsin Board of Nursing.

After completing this activity, the participant will be able to:

• Apply the pertinent physical and behavioral sciences—to include but not limited to advanced anatomy and physiology, pathology, pharmacology, physiology, and psychological and behavioral sciences. The influence of the physical and behavioral sciences on the delivery of health care will be considered.

• Explain the selection, dosing considerations with methods of administration, safe use, and the appropriate recommendations and/or requirements of pertinent external organizations.

• Apply the principles of safety and asepsis in the performance of anesthetic procedures and equipment; as appropriate, relevant applications and their role in the prevention of anesthetic and anesthesia related deaths in the surgical, labor and delivery suite, the pain management care, or other more remote location of anesthetizing services.

• Incorporate the appropriate recommendations and/or requirements of pertinent external organizations, publications, and professional organizations—considering as serving on the authority for and/or holding the responsibility to compile and approve such elements in the provision of pharmacology and/or pharmaceutical services, whether in the setting, pediatrics, oncology, infectious, or psychiatric care management standards.

• Apply the principles of safety and asepsis in the performance of anesthetic procedures and equipment; as appropriate, relevant applications and their role in the prevention of anesthetic and anesthesia related deaths in the surgical, labor and delivery suite, the pain management care, or other more remote location of anesthetizing services.

• Incorporate the appropriate recommendations and/or requirements of pertinent external organizations, publications, and professional organizations—considering as serving on the authority for and/or holding the responsibility to compile and approve such elements in the provision of pharmacology and/or pharmaceutical services, whether in the setting, pediatrics, oncology, infectious, or psychiatric care management standards.

• Apply the pertinent physical and behavioral sciences—to include but not limited to advanced anatomy and physiology, pathology, pharmacology, physiology, and psychological and behavioral sciences. The influence of the physical and behavioral sciences on the delivery of health care will be considered.

• Explain the selection, dosing considerations with methods of administration, safe use, and the appropriate recommendations and/or requirements of pertinent external organizations.

• Apply the principles of safety and asepsis in the performance of anesthetic procedures and equipment; as appropriate, relevant applications and their role in the prevention of anesthetic and anesthesia related deaths in the surgical, labor and delivery suite, the pain management care, or other more remote location of anesthetizing services.

• Incorporate the appropriate recommendations and/or requirements of pertinent external organizations, publications, and professional organizations—considering as serving on the authority for and/or holding the responsibility to compile and approve such elements in the provision of pharmacology and/or pharmaceutical services, whether in the setting, pediatrics, oncology, infectious, or psychiatric care management standards.

• Apply the pertinent physical and behavioral sciences—to include but not limited to advanced anatomy and physiology, pathology, pharmacology, physiology, and psychological and behavioral sciences. The influence of the physical and behavioral sciences on the delivery of health care will be considered.

• Explain the selection, dosing considerations with methods of administration, safe use, and the appropriate recommendations and/or requirements of pertinent external organizations.

• Apply the principles of safety and asepsis in the performance of anesthetic procedures and equipment; as appropriate, relevant applications and their role in the prevention of anesthetic and anesthesia related deaths in the surgical, labor and delivery suite, the pain management care, or other more remote location of anesthetizing services.

• Incorporate the appropriate recommendations and/or requirements of pertinent external organizations, publications, and professional organizations—considering as serving on the authority for and/or holding the responsibility to compile and approve such elements in the provision of pharmacology and/or pharmaceutical services, whether in the setting, pediatrics, oncology, infectious, or psychiatric care management standards.

• Apply the pertinent physical and behavioral sciences—to include but not limited to advanced anatomy and physiology, pathology, pharmacology, physiology, and psychological and behavioral sciences. The influence of the physical and behavioral sciences on the delivery of health care will be considered.

• Explain the selection, dosing considerations with methods of administration, safe use, and the appropriate recommendations and/or requirements of pertinent external organizations.

• Apply the principles of safety and asepsis in the performance of anesthetic procedures and equipment; as appropriate, relevant applications and their role in the prevention of anesthetic and anesthesia related deaths in the surgical, labor and delivery suite, the pain management care, or other more remote location of anesthetizing services.

• Incorporate the appropriate recommendations and/or requirements of pertinent external organizations, publications, and professional organizations—considering as serving on the authority for and/or holding the responsibility to compile and approve such elements in the provision of pharmacology and/or pharmaceutical services, whether in the setting, pediatrics, oncology, infectious, or psychiatric care management standards.

• Apply the pertinent physical and behavioral sciences—to include but not limited to advanced anatomy and physiology, pathology, pharmacology, physiology, and psychological and behavioral sciences. The influence of the physical and behavioral sciences on the delivery of health care will be considered.

• Explain the selection, dosing considerations with methods of administration, safe use, and the appropriate recommendations and/or requirements of pertinent external organizations.
